

AI Career Risk Analytics

AI时代大学生就业竞争力分析与职业风险预测系统

This report integrates job-posting signals, occupation skill references, salary trend analysis, and a transparent risk-scoring model for student career planning.

Model

AI Risk Score = 40% repetitive task + 30% AI exposure + 20% salary stagnation + 10% job decline.

Career Risk Ranking

occupation	ai_risk_score	future_demand_score	risk_band
Data Entry Clerk	83.00	40.75	High
Manual Tester	67.11	53.52	Medium
Basic Accountant	63.27	55.58	Medium
Business Analyst	42.11	71.87	Low
Financial Analyst	39.47	74.73	Low
Data Analyst	37.80	77.35	Low
Risk Analyst	31.60	81.10	Low
Software Engineer	31.40	83.35	Low
Quant Analyst	27.00	83.35	Low
Machine Learning Engineer	26.30	87.93	Low

Skill Value Ranking

skill	salary_growth_pct	last_salary_usd	posting_count
mlops	57.49	191886.33	12
pytorch	57.49	191886.33	12
machine learning	54.30	180730.33	24
risk modeling	50.85	169574.33	12
airflow	47.79	165016.67	12
data modeling	47.79	165016.67	12
spark	47.79	165016.67	12
cloud	47.33	160973.17	48

Student Simulator

Input: Major = Mathematics; Skills = SQL, Python.

occupation	student_fit_score	ai_risk_score	future_demand_score	recommended_skills
Quant Analyst	69.61	27.00	83.35	financial modeling risk modeling machine learning
Risk Analyst	67.68	31.60	81.10	excel model validation credit risk
Machine Learning Engineer	65.97	26.30	87.93	cloud pytorch machine learning mlops
Cybersecurity Analyst	65.86	24.30	86.78	cloud network security siem risk assessment
Data Engineer	65.63	25.80	86.95	spark cloud airflow data modeling

Business Value

Students can prioritize resilient career paths and skills. Universities can compare curriculum supply with demand signals. Employers can track role transformation under AI adoption.

Data Boundary

This version uses a reproducible demonstration dataset to validate the workflow. Serious forecasting should replace it with current, traceable, and compliant labor-market data.
